Patient Information

BOTOX INSTRUCTIONS
(After Botox Instructions)

- Do not lie down for several hours following Botox injections.
- Do not rub the injection sites. Any redness or "lumps" will resolve shortly after your treatment.
- Bruising may occur at injection sites, but should resolve in 1-2 weeks. It is normal to feel tightness or a heavy feeling near the eyebrows for 2-3 weeks.
- It may take 7-10 days for the Botox to work. With effort, you may still be able to frown.
- Botox may soften the wrinkles but it does not fill the lines. You may require additional treatments for deep wrinkles.
- Botox effects will last approximately 3 months. You may want to go ahead and make a follow-up appointment when you check out.

If you have any questions, please call our office at 336-954-7546.
